

Cal aul du périmetre

$$8m \times 2 = 16m$$

 $5,2m \times 2 = 10,4m$
 $3m \times 8 = 24 m$

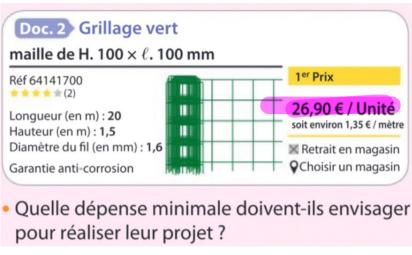

Il faut 50,4 m de grillage.

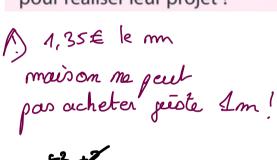

Dans les deux situations, on a exactement

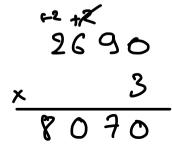

la mêrre valeur.

 Quelle dépense minimale doivent-ils envisager pour réaliser leur projet ?

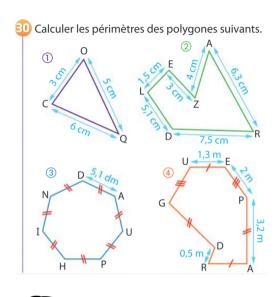

1 rouleau → 20m L, 26, 90 € 2 rouleaux → 40m ~ 26, 90 ×2 = 3 roulea. → 60nn

$$\frac{26,90 \times 3}{26,90 \times 3} = 80,70$$
×100 \(\frac{26}{26},90 \times 3 \)
×100 \(\frac{1}{26},90 \times 3 \)
×100 \(\frac{1}{26},70 \)
×100 \(\frac{1}{26}

Il faudra dépenser 80,70€ paur placer le grillage.

- 1) 3 cm + 5 cm + 6 cm =
- 2) 1,5cm + 3cm + 4cm + 6,3cm + 7,5cm + 5,1 cm = 27,4cm

5,1 dm x 7 = 35,7 dm

$$1.3 \text{ m} \times 2 + 2 \text{ m} \times 2 + 3.2 \text{ m} \times 2 = 3$$

$$-\frac{9cm}{4} + \frac{4cm}{4} + \frac{11,4cm}{4} = 27,4$$
