

coeff. /2

$$\frac{B}{b} = k$$

$$\frac{C}{c} = k$$

Calcul de
$$A\bar{\epsilon}$$
:

$$\frac{AD}{AB} = \frac{AE}{AC} \iff \frac{4}{2} \implies \frac{AE}{3}$$

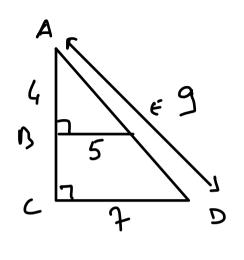

$$C=2 \quad AE = \frac{3\times4}{2} = 6$$
Calcul de BC :
$$AD = DE \implies 4 = 2$$

Salcul de BC:

$$\frac{AD}{AB} = \frac{DE}{BC} \Leftrightarrow \frac{4}{2000} \frac{2}{BC}$$

(=) BC = $\frac{2\times2}{4} = 1$

de théorème de Thatès des longueurs

Déterminer AE et AC.
